Questions:

1. Compare your list of groups with your friends. Do the groups that you have made match with everyone else? Why or why not?
2. Are there any big groups in your list which can be split into smaller groups? If yes, which group(s) and into what subgroups? (Do this for just one group.)
3. Are there any small groups in your list which can be combined into one big group? If so which groups can be joined and what features do they share in common?
4. Are there organisms in different groups that share some similarities? List them down and write which features they share in common.
5. What do you think all 20 organisms share in common?
