

The image shows several oil pumpjacks in silhouette against a bright orange and red sunset sky. The sun is low on the horizon, creating a strong backlighting effect. The pumpjacks are arranged in a line, with the one in the center being the most prominent. The overall mood is industrial and dramatic.

OIL INDUSTRY

WHY DID I CHOOSE THIS SYSTEM FOR MY PROJECT?

- I choosed the Oil Industry, because is something that bothers me a lot because my president “Andrés Manuel López Obrador” wants to spend an incredibly and stupidly amount of money on building a Petroleum Rrefinery, and that makes me so angry because we all know the oil industry is a failure, because it is something that at some point we are going to finish it, and not only because of that but because the use of things made by that industry are damaging our planet.

HOW IS THIS INDUSTRY FAILING US?

This industry is failing us because the more we use it the more damage we are making to our planet, of course there are some benefits but there are way more bad things about it than benefits right now, so why would we want cars that are cars that use petroleum or oil if one day because we didn't find or change our way to use cars and other things we will not even be able to go outside because the air will be so contaminated because of all the damage we have made to the earth that it will never recover again.

SOME ALTERNATIVES OR SOLUTIONS:

For cars, there is already electric cars or at least a Hybrid if you don't want to make the change so quick.

For all plastic plates and eating utensils, there has always been an alternative for that, actually some years before humans invented plastic plates and plastic eating utensils as an alternative so you didn't have to wash the metal ones in some occasions but before that we used to use only metal or wood utensils, so now we have to do the same we did before.

A pair of hands is shown holding a small, realistic globe of the Earth. The hands are positioned at the bottom and sides of the globe, with fingers gently cupping it. The globe shows continents in green and yellow and oceans in blue. The background is dark and out of focus.

CONCLUSION:

In Conclusion our world is ready and we are ready to start leaving the Oil Industry, is something that is affecting us and that we have to do, there are lots of alternatives in this days that we can start using until it completely disappears.

The future of the whole world is in each of our hands and we all have to start somewhere, if we start right now our world will start looking way much different in the future, it will be a more healthu world and better.

Its a big change and there will be some cons, but is something that we have to do so in the future we can live a better life.

The change is happening and you have to change too.
